

ALCF implementation of the IRI Facility API

1.0.0 OAS 3.1

[/openapi.json](#)[Click here](#) for authentication and usage examples.

The ALCF IRI API is available to all ALCF users.

[Terms of service](#)[ALCF - Website](#)

Servers

<https://api.alcf.anl.gov>[Authorize](#)

facility

**GET** `/api/v1/facility` Get Facility**GET** `/api/v1/facility/sites` List Sites**GET** `/api/v1/facility/sites/{site_id}` Get Site

status

GET `/api/v1/status/resources` Get all resources

GET `/api/v1/status/resources/{resource_id}` Get a specific resource

GET `/api/v1/status/incidents` Get all incidents without their events

GET `/api/v1/status/incidents/{incident_id}` Get a specific incident and its events

GET `/api/v1/status/events` Get all events

GET `/api/v1/status/events/{event_id}` Get a specific event

account

GET	/api/v1/account/capabilities	Get the list of capabilities	✓
GET	/api/v1/account/capabilities/{capability_id}	Get a single capability	✓
GET	/api/v1/account/projects	Get the projects of the current user	✓
GET	/api/v1/account/projects/{project_id}	Get a single project	✓
GET	/api/v1/account/projects/{project_id}/project_allocations	Get the allocations of the current user's projects	✓
GET	/api/v1/account/projects/{project_id}/project_allocations/{project_allocation_id}	Get a single project allocation	✓
GET	/api/v1/account/projects/{project_id}/project_allocations/{project_allocation_id}/user_allocations	Get the user allocations of the current user's projects	✓
GET	/api/v1/account/projects/{project_id}/project_allocations/{project_allocation_id}/user_allocations/{user_allocation_id}	Get a user allocation of the current user's projects	✓

compute

POST	/api/v1/compute/job/{resource_id}	Submit Job	✓
PUT	/api/v1/compute/job/{resource_id}/{job_id}	Update Job	✓
GET	/api/v1/compute/status/{resource_id}/{job_id}	Get Job Status	✓
POST	/api/v1/compute/status/{resource_id}	Get Job Statuses	✓
DELETE	/api/v1/compute/cancel/{resource_id}/{job_id}	Cancel Job	✓

filesystem

filesystem

PUT	/api/v1/filesystem/chmod/{resource_id}	Put Chmod		
PUT	/api/v1/filesystem/chown/{resource_id}	Put Chown		
GET	/api/v1/filesystem/file/{resource_id}	Get File		
GET	/api/v1/filesystem/stat/{resource_id}	Get Stat		
POST	/api/v1/filesystem/mkdir/{resource_id}	Post Mkdir		
POST	/api/v1/filesystem/symlink/{resource_id}	Post Symlink		
GET	/api/v1/filesystem/ls/{resource_id}	Get Ls Async		
GET	/api/v1/filesystem/head/{resource_id}	Get Head		
GET	/api/v1/filesystem/view/{resource_id}	Get View		
GET	/api/v1/filesystem/tail/{resource_id}	Get Tail		
GET	/api/v1/filesystem/checksum/{resource_id}	Get Checksum		
DELETE	/api/v1/filesystem/rm/{resource_id}	Delete Rm		
POST	/api/v1/filesystem/compress/{resource_id}	Post Compress		
POST	/api/v1/filesystem/extract/{resource_id}	Post Extract		
POST	/api/v1/filesystem/mv/{resource_id}	Move Mv		
POST	/api/v1/filesystem/cp/{resource_id}	Post Cp		

GET `/api/v1/filesystem/download/{resource_id}` Get Download

POST `/api/v1/filesystem/upload/{resource_id}` Post Upload

task

GET `/api/v1/task/{task_id}` Get Task

DELETE `/api/v1/task/{task_id}` Delete Task

GET `/api/v1/task` Get Tasks
